MACRO CONTEXT

The Venezuela Opportunity

Structural Seller Dynamics

Family-owned businesses are facing succession gaps as a decade of contraction and mass migration eroded next-generation continuity. Ownership transitions are occurring alongside acute capital scarcity, creating motivated sellers across resilient, cash-flowing assets — independent of asset quality.

Capital Access Asymmetry

Two capital pools operate in Venezuela on different terms. Embedded local capital with operating relationships underwrites assets through judgment and counterparty knowledge; remote institutional capital underwrites through templates and is structurally excluded.

Recovery Trajectory Precedent

Post-2000 inflection: Russia re-rated ~6x once capital, governance, and incentives realigned. Deep structural dislocations can bottom and recover faster than expected, as seen in the post-collapse USSR, where asset repricing accelerated once those conditions met. Venezuela has over \$200bn in lost GDP over the past 10 years on a path to recovery.

Deep structural dislocations can bottom and recover faster than expected.

MACRO CONTEXT

The Privatization & Expropriation Pipeline

1,162+	\$20bn+	~\$170bn	4
COMPANIES NATIONALIZED, 2002–2012	CONFIRMED ICSID AWARDS, NAMED CASES	EST. EXTERNAL CLAIMS & DEBT OVERHANG	DISPOSITION TRACKS, APR- 2026 COMMISSION

Sectors on the Privatization Track

An April 2026 Asset Evaluation Commission is sorting state holdings into four categories: retained, concession-style “strategic alliances,” full privatization, or liquidation. Leading candidates: basic industry (steel, cement), electricity (Corpoelec reform under legislative debate), upstream oil & gas, mining, ports & logistics (Bolipuertos’ 2026 hub redevelopment), and tourism/agricultural land. Telecom and banking are natural longer-dated candidates.

Expropriated Assets, 2000–2025

The wave began with 2001 land-reform legislation and accelerated after 2007: oil & gas JVs (ExxonMobil, ConocoPhillips), electricity, telecom (CANTV), steel (SIDOR), cement (Cemex, Holcim, Lafarge), banking, gold mining (Rusoro, Crystallex, Gold Reserve), ports & airports (centralized under Bolipuertos in 2009; a Puerto Cabello concession re-seized as recently as May 2025), and consumer/industrial manufacturing (Cargill, Kimberly-Clark, GM), plus ~20% of agricultural land.

Why It Matters for Entry

Restitution, concession, and privatization processes will surface operating assets with broken cap tables and motivated counterparties, precisely where local underwriting, family access, and structuring across jurisdictions carry a durable advantage over remote capital. VGC’s origination network puts a partner at the front of that queue as the tracks open through 2026.

THESIS

Essential Businesses, Three Sectors, One Access Advantage

We underwrite businesses a country cannot do without — food, power, and the credit that moves both — in a market where capital is scarce and relationships decide access.

01 Agro & Consumer Staples

Demand is non-discretionary and hard-currency linked. Fertilizer, seed, crop protection, and food manufacturing carry collateral a lender can see: receivables, inventory, and harvest. Project Harvest and Project P/F both sit here.

02 Energy

Industrial output is constrained by power, not demand. Behind-the-meter generation under long-tenor USD contracts converts an operating cost into restored production, and repeats across qualifying plants. Project Thunder sits here.

03 Financial Services

Insurance and structured credit are the connective tissue: balance-sheet capacity for local carriers, and instruments that make domestic obligations enforceable offshore. Engaged with a non-life carrier on reinsurance structuring.

TRACTION

Sixteen Companies Sourced in Four Months.

Since March 2026, companies have been sourced and screened through VGC's own network: no placement agent, no third-party origination.

PROJECTS OVERVIEW

Three Deal Types. One
Origination Engine.

Three live mandates span the capital stack: M&A and structured credit, debt and minority equity raise, and greenfield project finance

STAGE TRACK

ENGAGED → STRUCTURING → SIGNED → CLOSED → EXITED

01 · HARVEST	02 · THUNDER	03 · P / F	04 · FIN. SERVICES
Debt & Minority Equity	Greenfield Project Finance	M&A & Structured Credit	Concept · Minority Equity
MANDATE Growth & w.c.	MANDATE 12-mo term	MANDATE Structured credit	LEVER Reinsurance
2026E REVENUE \$100M+	PHASE 1 CAPEX ~\$10–20M	2026 REVENUE +\$10M	PATH Minority stake
TOTAL NEED Up to \$60M	FULL BUILD-OUT ~\$45–60M	PLATFORM TARGET \$100M+	STAGE Concept
Signed mandate to structure the company’s growth financing (working capital, machinery, and credit) for a fast-scaling agricultural inputs distributor. Total need of up to \$60M, including ~\$20M for contracted machinery.	Signed development mandate to structure an on-site solar-plus-storage microgrid for an industrial plant, with right of first offer on future site energy projects.	Signed mandate for structured credit into a regional pasta-manufacturing platform, with diligence complete on an adjacent wheat-milling asset available for purchase, for vertical integration.	Engaged directly with a non-life insurance carrier to expand balance sheet capacity through reinsurance structuring, ahead of a potential minority investment.
MANDATE SIGNED	MANDATE SIGNED	MANDATE SIGNED	ENGAGED · STRUCTURING

Each situation is anchored by a signed mandate.

CASE STUDY 01 · PROJECT HARVEST

A Signed Mandate to Scale a \$100M+ Platform

An experienced agricultural inputs distributor with \$100M+ in revenue. VGC holds a signed mandate to structure its next stage of growth.

01 · HARVEST

Debt & Minority Equity

THE VERTICAL

illustrative

TODAY · INPUTS DISTRIBUTION

A Fast-Scaling National Platform

Active nationally, distributing fertilizer, seed, and crop-protection products with an advisory layer, built rapidly by an experienced founding team with deep sector relationships. 2026E revenue of \$100M+ with ~60% CAGR from '23–'25 and a 2030 target of \$300M+.

COMPETITIVE POSITION

The country’s largest fertilizer distributor, supplying every one of the nation’s largest producers.

EXPANSION · MACHINERY & CREDIT

Financing the Next Leg of Growth

Signed mandate to structure the company’s growth financing (working capital, machinery, and credit) secured by harvest and machinery collateral. Total need of up to \$60M, including ~\$20M for contracted machinery.

DISTRIBUTION RIGHTS

Exclusive distribution rights with a Brazilian machinery producer, with further OEM agreements in negotiation and a stated roadmap into adjacent verticals, including banking.

SCALE, COLLATERAL & COMPETITIVE POSITION

EXCLUSIVE DEVELOPMENT
MANDATE

SITE

THE SITUATION

The industrial plant operates at ~50% of installed capacity, held there by unreliable grid supply and expensive diesel self-generation. Reliable power is the single lever that restores lost production, and lost EBITDA — capacity the plant already has, and demand it already has.

THE STRUCTURE

On-site solar-plus-storage under a long-tenor USD PPA. Energy is priced as an operating expense out of the existing diesel budget. The client contributes land, site works, existing substation and interconnection in kind, cutting project cost and locking in alignment.

WHY IT DE-RISKS

The PPA gives the project a contracted hard-currency revenue line against power the plant already buys, at a lower delivered cost than diesel. In-kind contribution of land, site works, and interconnection aligns both sides in the asset, and retained on-site generation backstops reliability.

Full engineering study and financial model available upon NDA execution. The market argument follows overleaf.

A phased path to plant-wide power independence, on contracted terms.

CASE STUDY 02 · PROJECT THUNDER (CONT.)

Venezuelan Industry Is Capacity-Constrained by Power, Not Demand

02 · THUNDER

Greenfield Project Finance

01 The Constraint

Grid power fails daily; diesel self-generation is costly and unreliable. Plants run materially below installed capacity for want of dependable power. The binding constraint is energy, not the market.

03 The Screen

Private industrials with hard-currency or export revenue, running below capacity due to power, on adjacent land, with no capital budget for self-build and willingness to sign a long-tenor USD PPA.

02 The Unlock

Behind-the-meter solar plus storage doesn't just cut the energy bill; it restores idled production. A long-tenor USD PPA converts existing diesel spend into reliable power at zero capital cost to the client.

04 Why It Repeats

Cement, steel, glass, ceramics, food processing, packaging: 5–30 MW loads, plausibly dozens of qualifying plants. One structure (PPA plus in-kind contribution) stamped across the pipeline.

THE REPLICABLE UNIT

10–20 MW
PER PROJECT

\$20–40M
CAPEX PER PROJECT

15-yr
USD PPA, HARD-CURRENCY OFFTAKER

Project one proves the model; the pipeline scales it.

WHY US

Access No Outside Partner Can Replicate

01	Family Network & Ownership Ties	Direct family relationships anchoring leadership of target portfolio companies in the platform’s core industrial vertical, access unmediated by intermediaries and unavailable to outside investors.
02	Interior Presence, Beyond Caracas	Established relationships and operating presence in Venezuela’s interior industrial centers, particularly the Zulia region, where significant platform pipeline is based.
03	Local Market Knowledge	Broader relationships with operating families and industrial groups across target sectors, built over years of resident engagement rather than remote coverage.
04	Regulatory & Institutional Access	A board-level position within a leading Venezuelan industrial group, with standing relationships across regulatory and ministerial counterparties relevant to the platform’s target sectors.

THE TEAM

The Two People You Are Hiring, and the Bench Behind Them

Federico Pineda

FOUNDER & MANAGING PARTNER Caracas, VE

Board Member at Grupo Catatumbo, a diversified industrial holding company in Western Venezuela. Former JPMorgan associate advising hedge funds and family offices with \$2.5B+ AUM. Head of Capital Markets at Divibank (Maya Capital & BTV backed). Venezuelan-American with on-the-ground presence and institutional capital markets background.

Miguel Jimenez

OPERATING PARTNER Miami, USA

Managing Partner, V1 Partners — independent AI-transformation advisory to PE sponsors and technology companies, mid-market M&A across the US and LatAm. Former VP, SoftBank Investment Advisers (Vision Fund), energy focus. MIT Sloan MBA.

Esteban Pineda

SENIOR ADVISOR Maracaibo, VE

President & CEO of Cementos Catatumbo, the only privately owned cement company in Venezuela. Deep operating experience in industrial assets under prolonged macro stress. First-hand expertise in logistics, labor, and government relations in complex environments.

PARTNERSHIP MODEL

The Venezuela Coverage Mandate

01 Proprietary Flow & First Look

Every opportunity VGC sources across its verticals, surfaced through family, industrial, and regulatory relationships, is presented to the partner first, ahead of any broader process. Every deal in this deck was originated exactly this way.

02 Sourcing & Initial Diligence

Active screening against the partner’s mandate criteria, with on-the-ground verification of financials, operations, and counterparties, delivered as institutional deal memos with proposed structures, not teasers.

03 Country & Sector Intelligence

A standing briefing line: macro and policy developments, the privatization pipeline as it opens, sector maps, and counterparty intelligence no remote desk can replicate: the context that turns a data point into a decision.

04 Participation Rights

The option, never the obligation, to invest in opportunities that clear the partner’s bar, with VGC as local execution partner. When something clears, the partner is months ahead of competing capital.

THE ASK

Be Our First Capital Partner

Dedicated Venezuela coverage. You see everything we see, get first look at everything we source, and when something clears your bar, you are months ahead of everyone else.

THE RETAINER FUNDS THE WORK

In-country sourcing, site visits, diligence travel, and the standing presence that produces the deal flow, priced as advisory services and independent of any transaction outcome. Transaction-level economics (success fee or co-invest promote) are negotiated deal-by-deal and documented separately from the retainer.

SCOPE IS SET TO YOUR MANDATE

Sectors, check sizes, and structures agreed up front; deliverables cadence and first-look mechanics documented in a counsel-reviewed engagement letter.

DAY-ONE VALUE

The platform pipeline, the Thunder technical file, and the consumer-staples diligence work transfer into your first briefing.

Retainer

MONTHLY, SCOPED TO YOUR MANDATE (SIX-MONTH MINIMUM)

How VGC Sources, Structures, and Closes

01 Screening

SEARCH CRITERIA

Control equity, minority equity, and structured credit, with sector, size, and geography defined against the partner’s mandate.

LOCAL NETWORK

Family, industrial, and regulatory relationships surface opportunities before formal sale processes begin.

OUTPUT

A broad, ranked pipeline, from early relationship-stage targets to signed LOIs and mandates, sorted by strategic fit.

02 Structuring & Diligence

ON-THE-GROUND DILIGENCE

Financials, operations, and counterparty relationships verified directly, on site.

DEAL STRUCTURING

Control-equity, structured credit, or hybrid terms shaped to the asset and seller situation.

OUTPUT

Underwritten opportunity ready for capital commitment.

03 Execution

NEGOTIATION

Terms finalized directly with counterparties and their advisors.

CLOSING

Transaction documentation, capital call, and legal execution managed end to end.

OUTPUT

Closed position, with ongoing governance and reporting.

Sourced, Signed, and Scaling

03 · P / F

M&A & Structured Credit

01 Surfacing the deal before the market			PROPRIETARY SOURCING
ACCESS	POSITION	READ	
Regional pasta-manufacturing platform surfaced through direct family and industrial relationships: no banker, no process.	Signed mandate to finance a new production line, structured directly with the counterparty.	Exclusive negotiating position on the first leg of a bridge to a \$100M+ fully integrated food distributor.	
02 Testing the deal against the bar			UNDERWRITING & MOMENTUM
DILIGENCE	FINDING	OUTPUT	
Financials, operations, and counterparty exposure verified directly at the asset.	Revenue run-rate has tripled in six months on 57% year-over-year growth, tracking to +\$10M by year-end.	A financing structure sized to a platform that is compounding in real time, not a projection.	
03 Signed and scaling			DISCIPLINED EXECUTION
DECISION	ADJACENT	PROOF	
Proceeded on signed terms once growth and counterparty diligence cleared VGC’s underwriting bar.	Diligence complete on an adjacent wheat-milling asset available for purchase: distressed ownership succession, vertical integration into the same supply chain.	The credit LOI opened the window: the adjacent milling asset came from the same relationship, not a second search. Scaling follows access.	

Two adjacent assets, one integrated platform.
